Script for the Review (SFR)

| ☰ Phase	Ideation
🗐 Due Date	@April 8, 2022

- Overview of the approach:
  - Two members of the company will do the presentation
  - Catch attention by starting with day-to-day examples to show the importance of our application, and then present the solution.
  - Try to make it as understandable, direct, and as simple as possible.
- Outline of the steps:
  - We will initially present some problems related to resource and project management and show how our product can mitigate or even fix these problems (Motivations) and present the reasons why our company decided to develop this product (Objectives).
    - These problems are going to be real-world problems, like day-to-day tasks, comparing the portfolio prioritization of a big company, to some small thing in a normal person's life, in order to keep the client captivated.
  - After this, we will demonstrate some usage scenarios and some of the functionalities that the product will have (Functionalities).
    - Again, comparing to simple tasks, shows how powerful the product can be when used in the right places and opportunities.
  - After getting everyone's attention, we can then proceed to present the technologies that are being used and why they are being used (Architecture and Technologies).
    - The reasons why we choose node.js + react to develop our applications (Mostly due to the fact that can easily be integrated with Microsoft Teams)
  - Finally, we will reveal how our company has planned to handle the development of the product (Dev. Plan).
    - We will establish dates for each increment/sprint, features that are expected to be implemented, what we will focus on developing first, and the expected date of release.
- Responsible
  - André Assunção
  - Henrique Pereira
